

WIRES Call number 1046808 - nr37435 – Zarra

Female Pademelon

Wombaroo with Impact

280gram 20/08/2016 fine covering of fur

432gram 27/09/2016 .

510 1/10/2016 .

676 13/10/2016 all good

718 18/10/2016 all good

22/10/2016 Joey was reluctant to drink 2pm bottle, seemed lethargic. At 7pm feed time she in her pouch shaking and breathing very heavy, hot to touch and throwing head back, eyes non responsive. Taken inside, given 0.3 mill of Pamlin plus 0.02 mill of Meloxicam. 4 hours later joey was back to normal temperature and able to drink a small amount of 1/2 strength lectade. Toileted and passed large amount of normal urine. Was still slightly sedated, but body function normal and eyes focusing. At midnight given 1/2 strength lectade again, drank 25 mill and passed good amount of normal urine.

712gram 23/10/2016 Joey kept inside overnight and this morning drank her bottle of Wombaroo, plus 10 mil of water after. Normal urine output and colour. Body function normal, eyes focusing. Keeping inside for now, have made no attempt to hop out of pouch. This is consistent with male Pademelon joey that had the same turn twice earlier this week. These 2 joeys share pouch often.

26/10/2016 Joey had been to Lismore vet clinic Nick Jones in the morning for blood tests, came back and I put her in the enclosure. She later had her bottle and water following, and seemed fine. She was also given 0.04 mil of Trialbactril injectable, to try to stop a possible infection. Came into the enclosure at 5pm and she was shaking, eyes fixed, same as last time and same as Yagarra that died yesterday. Zarra given small amount of Diazepam, 0.02 mill of Meloxicam and taken inside.

748gram 27/10/2016 joey unsteady on back legs, can't balance. Drinking bottle and water fine. Still inside.

29/10/2016 Joey put back outside, still slight balance issue but hopping in pen and getting back into pouch ok by herself

798gram 1/11/2016 Joey found in pen at am feed hiding in ' 'hidey' hole in enclosure, shaking and heart razing. Taken inside, sedated with pamlin and given meloxicam injection. 4 hours later fully awake, heart rate normal. given 25 mill of 1/2 strength lectade. Stil on antibiotics. Next feed drank 22 mil of wombaroo 07 plus 10 mill of 1/2 strength lectade. Kept inside, unable to keep balance and only just able to stand on legs with help.

7/11/2016 Joey found in pouch shaking violently at 2.15 pm, drank bottle and water, then taken inside and sedated with pamlin. Recovered after 5 hours drank 25 mill of Lectade. Put back outside

at 11pm drank bottle and water. Hopped out of pouch to graze still slightly off balance. Recovery was faster this time probably due to pamlin intervention before full fit had commenced.

8/11/2016 at 11am although balance was still not great, she was hopping around grazing. Not wanting to stay in pouch.

Found joey dead in pouch at 4pm.

9/11/2016 Body taken to Uralba St Vet nick Jones
